"Identification and quantification of N-linked glycoproteins using hydrazide chemistry, stable isotope labeling and mass spectrometry.";
Nat. Biotechnol. 21:660-666(2003).

-I- FUNCTION: This protein is an integral component of basement membranes. It is responsible for the fixed negative electrostatic charge and is involved in the charge-selective ultrafiltration properties. It serves as an attachment substrate for cells.
-I- SUBUNIT: Purified perlecan has a strong tendency to aggregate in dimers or stellate structures. It interacts with other basement membrane components such as laminin, prolargin and collagen type
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  J. Biol.

                                                                                                                                                                                                                                   SUBCELLULAR LOCATION: Extracellular.

TISSUE SPECIFICITY: Found in the basement membranes.

PYM: CONTAINS THREE HEPARAN SULFATE CHAINS AS WELL AS N-LINKED AND O-LINKED OLIGOSACCHARIDES.

DISEASE: Defects in HSPG2 are the cause of Schwartz-Jampel Syndrome (SUS1) [MIM:255800]; a rare autosomal recessive disorder characterized by permanent myotonia (prolonged failure of muscle relaxation) and skeletal dysplasia, resulting in reduced stature, kyphoscoliosia, bowing of the disphyses and irregular epiphyses. SIMILARITY: Contains 4 LDL-receptor class A domains.

SIMILARITY: Contains 11 laminin EGF-like domains.
                                                                                                      SIMILARITY: Contains 3 laminin IV domains.
SIMILARITY: Contains 22 immunoglobulin-like C2-type
SIMILARITY: Contains 3 laminin G-like domains.
SIMILARITY: Contains 4 EGF-like domains.
SIMILARITY: Contains 1 SEA domain.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  TISSUE SPECIFICITY: B lymphocytes.

DOMAIN: Contains 4 copies of a cytoplasmic motif that is referred to as the immunoreceptor tyrosine-based inhibitor motif (ITIM). This motif is involved in downmodulation of cellular responses. The phosphorylated ITIM motif binds to the SH2 domain of PTPN6/SHP-1.
                                                                                                                                                                                                                                                                                                                                                                                        European
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 surface. Upon ligand induced tyrosine phosphorylation in the immune response seems to be involved in regulation of B cell antigen receptor signaling. Plays en in positive regulation through interaction with Src family tyrosine kinases and may also act as an inhibitory receptor by recruiting cytoplasmic phosphatases via their SH2 domains that block signal transduction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    the localization of B-cells in lymphoid tissues. Binds sialyla glycoproteins; one of which is CD45. Preferentially binds to alpha2,6-linked sialic acid. The sialic acid recognition site be masked by cis interactions with sialic acids on the same ce
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DATABASE: NAME=PROW; NOTE=CD guide CD22 entry; WWW="http://www.ncbi.nlm.nih.gov/prow/cd/cd22.htm"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CAUTION: Ref. 4 sequence differs from that shown frameshift in position 806.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  PTM: Phosphorylated both on threonine/serine and tyrosine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Name=CD22-alpha;

"Identification of cDNA clones encoding different domains of the basement membrane heparan sulfate proteoglycan.";
J. Biol. Chem. 263:16379-16387(1988).
-I- FUNCTION: This protein is an integral component of basement membranes. It is responsible for the fixed negative electrostatic charge and is involved in the charge-selective ultrafiltration
                                                                                                                                                                                                                                                                                                                                                                                                                                                                MOUSE

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         membrane components such as laminin, prolargin and IV.

SUBCELLULAR LOCATION: Extracellular.

TISSUE SPECIFICITY: Found in the basement membran. TISSUE SPECIFICITY: Found in the basement membran. THEE HEPARAN SULFATE CHAINS AS WELLAND O-LINKED OLIGOSACCHARIDES.

SIMILARITY: Contains 4 LDL-receptor class A domain. SIMILARITY: Contains 11 laminin EGF-like domains.

SIMILARITY: Contains 3 laminin IV domains.

SIMILARITY: Contains 15 immunoglobulin-like C2-ty.

SIMILARITY: Contains 1 EGF-like domains.

SIMILARITY: Contains 1 EGF-like domains.

SIMILARITY: Contains 1 SEA domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    European
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SWISS-PROT entry is

J. Neurosci. Res. 42:547-561(1995).

-I- FUNCTION: Cell adhesion molecule with an important role in the development of the nervous system. Involved in neuron-neuron adhesion, neurite fasciculation, outgrowth of neurites, etc. Bit o axonin on neurons (By similarity).

-I- SUBCELULLAR LOCATION: Type I membrane protein.
-I- TISSUE SPECIFICITY: Expressed in postmitotic neurones in 16-36 hour embryos, including those in the brain, cranial ganglia and otic and olfactory placodes, and in all classes of spinal
                                                                                                                                                                                                                                                                                                                                                                                                                               CAM1 BRARE

DEVELOPMENTAL STAGE: Onset of expression correlates with the initiation of axonogenesis in 16-36 hour embryos. SIMILARITY: Belongs to the immunoglobulin superfamily. L1/neurofascin/NgCAM family. SIMILARITY: Contains 6 immunoglobulin-like C2-type domains. SIMILARITY: Contains 5 fibronectin type III domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            173

                                                                                                                                                                                                   MISCELLANEOUS: The sequence shown is the Kern-/Oz-/Mcg-chain found in proteins SH, X, and NIG-64. The Kern protein has the Kern the NEWN protein has the Oz+ marker, the Mcg protein has the Kern+ marker, and the Mcg+ marker.

MISCELLANEOUS: Six tandem lambda-type genes were identified and the J most 5 were sequenced. These correspond to the Mcg sequence (lambda-1), the Kern-/Oz- sequence (lambda-2) and the Kern-/Oz-
                                                                                                                                                                           sequence (lambda-3).
SIMILARITY: Contains 1 immunoglobulin-like domain.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         of phagocytosis, mast cell activation and dendritic cell activation. CD47 binding prevents maturation of immature dendritic cells and inhibite cyrokine production by mature dendritic cells. SUBUNIT: Binds PTPN11 when tyrosine-phosphorylated, except in macrophages, where it primarily binds PTPNC. Binds GRB2 in vitro. Binds FGR (By similarity). Binds JAK2 irrespective of its phosphorylation status and forms a stable complex. Binds SCAP1 and/or SCAP2. The resulting complex recruits FYB. Binds PTK2B. SUBCELLULAR LOCATION: Type I membrane protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SIMILARITY: Contains 2 immunoglobulin-like C1-type domains. SIMILARITY: Contains 1 immunoglobulin-like V-type domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    IsoId=P78324-3; Sequence=VSP_007029;
Note=No experimental confirmation available;
TISSUE SPECIFICITY: Ubiquitous. Highly expressed in brain.
Detected on myeloid cells, but not T cells. Detected at lower levels in heart, placenta, lung, testis, ovary, colon, liver, small intestine, prostate, spleen, kidney, skeletal muscle an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           other binding partners from the cytosol to the plasma membrane. Supports adhesion of cerebellar neurons, neurite outgrowth and glial cell attachment. May play a key role in intracellular signaling during synaptogenesis and in synaptic function (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     similarity). Involved in the negative regulation of receptor tyrosine kinase-coupled cellular responses induced by cell adhesion, growth factors or insulin. Mediates negative regulation
